

The ecobee Smart Thermostat – green made easy.
 Connected to you, your home and your environment.

The smart choice for the smart contractor, the ecobee Smart Thermostat is easy-to-use and program, with a touch screen just like a smartphone. This means increased sales, fewer call-backs and greater profitability. ecobee's wireless internet capability allows you to control the thermostat remotely with a few simple clicks - saving time, money and energy. With built-in 5 day weather data, humidity sensor, outdoor temperature and indoor temperature the ecobee is the premier thermostat.

Remote Access Thermostat: Control your ecobee remotely from your Android phone, iPhone, BlackBerry or personal computer. Program and make changes to your thermostat from anywhere in the world, review runtime data, outdoor temperature and indoor temperature where the ecobee is installed and receive email alerts of any issues immediately.

Easy to install: The Smart Thermostat is a 4-wire install, making it compatible with existing thermostat wiring, eliminating the need to run new wires. With its interactive wizard, the ecobee can be programmed in under 2 minutes. The installation wizard provides a checklist for configuring the thermostat, and technicians can view a thermostat wiring diagram on the ecobee screen.

The Superior Geothermal Thermostat: The ecobee offers similar features to the WaterFurnace TP Series thermostat but also adds remote access features and additional time and temperature features for staging on all three stages of heat. With proper contractor training from Eden Energy, this thermostat can give consumers new levels of savings with their WaterFurnace install.

Unique contractor portal: This web tool allows you to manage all your ecobee thermostat installations remotely. Contractors are notified of equipment errors, service reminders and more. Customers receive alerts with your company logo and contact information helping you to maintain the service relationship with your customer.

Our website, www.edenenergy.com/ecobee contains resources, manuals and guides on how to install and service the ecobee Smart Thermostat.

USING THE TOUCH SCREEN

The ecobee Smart Thermostat uses touch screen technology that makes navigation easy. With your finger, lightly tap the icons, buttons and lists or drag your finger across the screen to move a slider or scroll wheel.

temperature slider

Use your finger to press and move the set temperature slider left or right until the value in the magnifying lens displays the temperature you desire.

system & fan settings

WiFi signal strength

home button
